# What Frankie is used for

A full-export assessment, with real examples and explicit percentage bases.

**427,081**
message records

**93,987**
user messages

**3,838**
users who sent a message

### Events dominate outgoing templates

127,810 event and Opening Week templates = 77.81% of 164,256 templates. Invitations account for 97,975 records.

### Main identifiable questions: food, events and registration

Lunch: 15.81%; events: 14.30%; registration: 5.97% of 58,449 classified requests. Context-dependent messages remain a large classification gap.

### Frequent replies; correctness still needs validation

98.97% of classified request turns have a subsequent outgoing record within 30 minutes. This measures response coverage, not successful or correct answers.

### Repeat use across the entire exported history

3,059 users (79.70%) wrote in at least two different weeks; 83 (2.16%) wrote in 27 or more weeks. Percentages use all 3,838 users who ever wrote.

Sources: S1-S4. Users = distinct conversation user IDs; total histories: 4,173. Definitions and source index: page 8.

# Questions and event use cases

Request topic percentages use 58,449 classified incoming requests as the denominator.

| Question / request topic | Records | Share |
|---|---|---|
| Other / context-dependent | 23,859 | **40.82%** |
| Lunch / food | 9,239 | **15.81%** |
| Events / clubs / networking | 8,357 | **14.30%** |
| Registration / tickets | 3,492 | **5.97%** |
| Timetables / classes | 3,067 | **5.25%** |
| Opening Week / onboarding | 2,546 | **4.36%** |
| Exams / grades | 2,069 | **3.54%** |
| Campus / facilities | 1,765 | **3.02%** |
| IT / Canvas / accounts | 1,315 | **2.25%** |
| Other classified topics | 2,740 | **4.69%** |

"Other" does not mean an unclear question.
E6: after an invitation to Co-Founder Wanted 9.0, the student asks "What is it about". Frankie replies: "It's a two-day startup event for aspiring founders..."
The question is clear in context; standalone text rules miss the event reference.

**E6 | Open conversation**

## Most common event function: invitations

| Event-related template type | Records | % of all templates |
|---|---|---|
| Invitations | 97,975 | **59.65%** |
| Event digests | 20,135 | **12.26%** |
| Opening Week logistics | 5,088 | **3.10%** |
| Confirmations / reminders / cancellations | 4,612 | **2.81%** |
| All event-related templates | 127,810 | **77.81%** |

Top named campaign: Real Estate Career Day, 4,265 messages (4.80% of 88,866 named invitations in two template families). These are sending volumes, not attendance or ticket conversion.

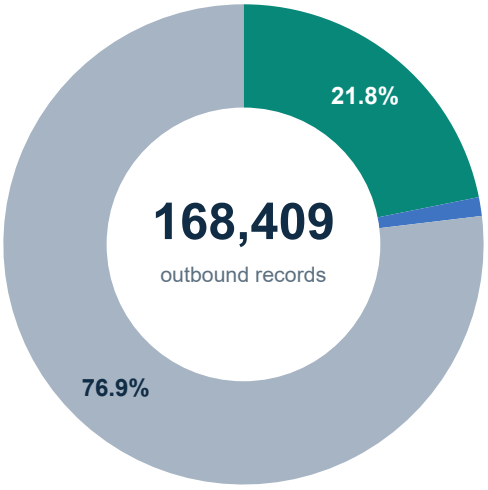

Sources: S1, S3, S4. Automated topic estimates retain the original narrow 89-message opt-out label; page 6 expands that review.

# Where answers come from

BookStack is part of the knowledge setup; the dashboard also exposes separate operational data.

Verified in the live FS dashboard: Knowledge Base contains Programs, Modules, FS Staff and Bookstack. The Bookstack link opens a separate BookStack service, which requires its own login.
Documented knowledge path: BookStack pages → BookStackManager sync → internal paragraph search (TextEmbedder) → Frankie answer.

## Source markers on outbound reply records

- Knowledge references present — 36,782 | 21.84%
- Event ID; no knowledge reference — 2,132 | 1.27%
- Neither source marker recorded — 129,495 | 76.89%

76.89% without markers does not mean 76.89% unsupported. The export cannot prove the exact origin of these replies. References identify retrieved material, not necessarily which statement used it.

### E7 / A traceable knowledge answer

Student: "When can I go to the it support?"
Frankie: "You can visit the IT Student Support Desk in the library. It's open Monday to Friday from 12:00 to 14:00 and 16:00 to 17:00."
Recorded reference: file 27, "27 - IT Support (all-programs)", plus paragraph IDs and retrieval scores. Other references were also attached.

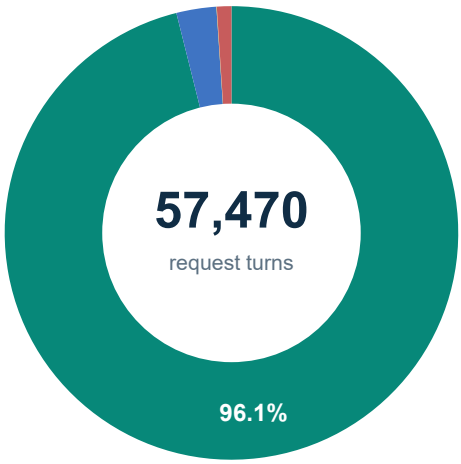

E7 | Open conversation

Other routes: event invitations and booking workflows use CRM/event data; the documented CanteenManager collects menus from a canteen website; UCS carries staff messages. These routes are not interchangeable with BookStack content.

Sources: S1, S2, S5. Documentation: pp. 116-119, 121-124, 154-156. Live BookStack pages were not accessible beyond login.

# What a question receives

Separate response coverage, visible links and assessed answer quality.

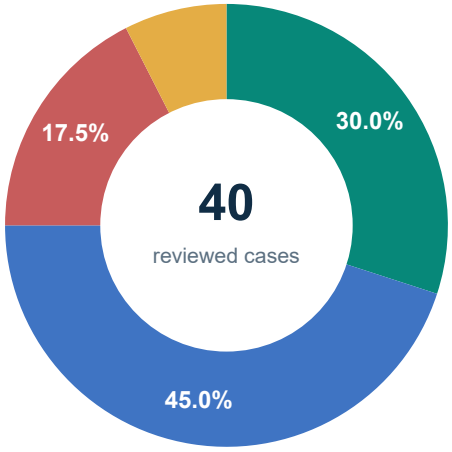

| | |
|---|---|
| First reply: outbound | 55,223 \| 96.09% |
| First reply: template | 1,636 \| 2.85% |
| First reply: staff / UCS | 18 \| 0.03% |
| No outgoing within 30 minutes | 593 \| 1.03% |

98.97% receive a subsequent outgoing record within 30 minutes. For all 89,410 user turns, including non-requests, the rate is 98.03%. Consecutive incoming messages within 30 minutes form one turn. Temporal matching can include unrelated notifications.

Links: 14,058 of 168,409 outbound records contain a visible URL: 8.35%. Including structured payload URLs gives 14,502 records: 8.61%.
These are message-record rates, not the percentage of users who clicked or solved their task.

## Answer-quality pilot: 40 reviewed cases

| | |
|---|---|
| Direct substantive answer | 12 \| 30.00% |
| Partial / navigation / referral | 18 \| 45.00% |
| Unresolved / visible problem | 7 \| 17.50% |
| Action status unverified | 3 \| 7.50% |

This is not an overall success rate. The pilot takes four cases from each of ten groups and is not weighted to usage. A useful link can fully solve a navigation question; a direct answer can still contain an unverified fact.

Sources: S1, S3, S4, S6. Coverage uses time-based matching; quality uses a small content review. Do not combine their percentages.

# Real messages: good and bad

Short excerpts; German messages are translated into English and marked as translations.

## A link solved the task

Student: "Hi where can I find my schedule for my classes"
Frankie: "Your lecture schedule is in Canvas, under the Calendar icon on the left menu bar."
Student: "Yes it worked thank you!!!"

Assessment: User-confirmed navigation success. A Canvas link accompanies the guidance.

E2 | Open conversation

## A link did not give the date

Student: asks for a business administration retake date.
Frankie: points to TimeEdit.
Student: "Can't you just give me the schedule?" (translated)

Assessment: The requested date or schedule is not supplied in the excerpt.

E3 | Open conversation

## Stop request enters wrong flow

Student: "Stop texting me"
Frankie: "Hey there, I'm Frankie" [onboarding template].
Student: "Or how about you just leave me alone" [emoji omitted].

Assessment: Visible intent-routing failure. The conversation does not prove whether subscription settings changed.

E4 | Open conversation

## Booking works; formatting fails

Frankie: "you've successfully booked a seat" [confirmation excerpt].
Confirmation field: "Date & Time: Foyer"
Student: "Now it worked." (translated)

Assessment: User reports success, but the date/time field visibly contains a location.

E5 | Open conversation

## E1 / Direct practical information: daily menu

Student: "What is the menu today"
Frankie: provides a dated menu with dishes and prices, including pumpkin cream soup.
Assessment: the requested content is delivered in chat; historical menu accuracy was not independently verified.

E1 | Open conversation

Source: S1. E1-E5 are illustrative cases, not a random sample. Exact source rows, conversation links and dates: page 8.

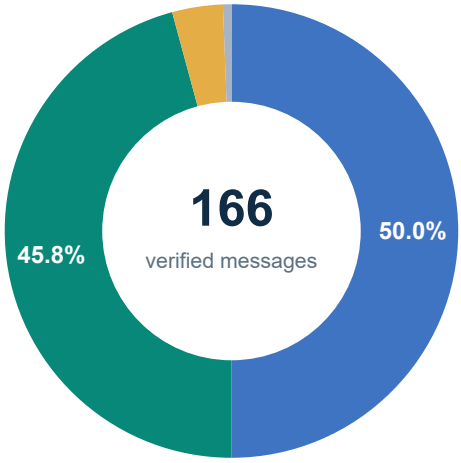

# Stop and unsubscribe requests

Full-export bilingual search, followed by review of message intent and nearby context.

**166**
verified stop / opt-out messages

**103**
distinct requesting users

**24**
users who asked more than once

| | |
|---|---|
| General / unspecified messages | 83 \| 50.00% |
| Lunch / menu | 76 \| 45.78% |
| Events / workshops / ads | 6 \| 3.61% |
| Other specific content | 1 \| 0.60% |

0.18% of all 93,987 incoming messages are verified opt-out requests. 2.68% of 3,838 users who ever wrote made at least one. Scope uses wording and nearby context. General stop requests may include events; the six event-related cases do not measure all event dissatisfaction.

## What users actually wrote

E8 / Lunch: "stop lunch updates but keep other updates"

E9 / Events: "i dont want you new event alerts anymore"

E10 / On demand only: "Please do not send me anymore messages unless I ask you something"

### Count intent separately from whether the system complied

Of 338 screened candidates: 166 confirmed, 165 excluded, 5 ambiguous, 1 frequency-reduction request and 1 account-deletion request. E4 shows a wrong response; no overall unsubscribe-compliance rate is established.

Source: S1, S7. This broader review replaces the previous narrow 89-message count. Free-text search may still miss paraphrases.

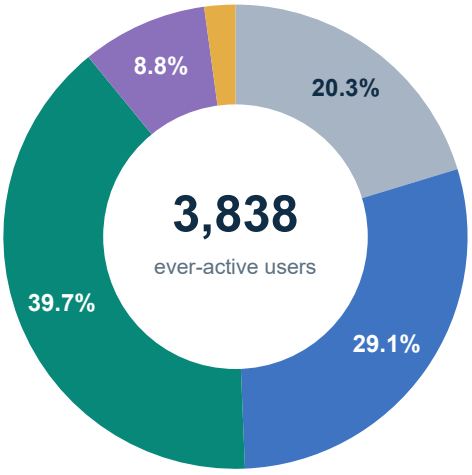

# Repeat use across the whole history

16 April 2025 - 13 October 2026: 546 calendar days spanning 79 calendar weeks.

**3,838**
users who ever sent a message

**67**
average daily active users

**304**
average weekly active users

| | |
|---|---|
| Active in 1 week | 779 \| 20.30% |
| Active in 2-4 weeks | 1,115 \| 29.05% |
| Active in 5-12 weeks | 1,525 \| 39.73% |
| Active in 13-26 weeks | 336 \| 8.75% |
| Active in 27+ weeks | 83 \| 2.16% |

## Total active days per user across the full history

| Distinct active days | Users | % of 3,838 |
|---|---|---|
| 1 day | 665 | **17.33%** |
| 2-3 days | 589 | **15.35%** |
| 4-7 days | 853 | **22.23%** |
| 8-14 days | 1,010 | **26.32%** |
| 15-30 days | 555 | **14.46%** |
| 31-60 days | 137 | **3.57%** |
| 61+ days | 29 | **0.76%** |

Repeat use: 3,173 users (82.67%) wrote on multiple days; 3,059 (79.70%) wrote in multiple weeks. The highest observed totals are 109 active days and 47 active weeks. No user wrote in every calendar week of the full export.

Weeks need not be consecutive. This is lifetime frequency, not a retention rate: users joined at different times. The 335 histories with no incoming messages are excluded from the chart.

S1, S4. Active = incoming message; Frankfurt time. Rounded averages exclude partial boundary dates/weeks (544 days; 77 weeks).

# Evidence and reading the numbers

Every chart states its denominator. Examples link to the relevant dashboard conversation.

S1 / Complete export: output/frankie-export-20261013T095511Z/messages.jsonl; 427,081 records, not the shortened conversation preview.
S2 / Live dashboard: FS Dashboard - Knowledge Base; Bookstack opens the linked BookStack service. Checked 13 Oct 2026.
S3 / Verified counts and topics: verified-counts.json and user-intents.json.
S4 / Activity and response calculations: engagement-and-response.json.
S5 / Technical documentation: "Frankie product and technical dosumentation 20261001.pdf", pp. 116-119, 121-124, 154-156.
S6 / Quality pilot: tmp/message-analysis/outcome-review.json.
S7 / Opt-out audit: reviewed-optouts.json; all screened cases retain decisions.

## Example source index

| Example | Date (UTC) | Export row(s) |
|---|---|---|
| E1 Daily menu | 2026-09-28 | **144673, 144672** |
| E2 Canvas navigation | 2026-08-18 | **135915, 135914, 135913, 135911** |
| E3 Retake schedule | 2026-03-08 | **247835, 247833, 247832, 247831, 247829** |
| E4 Stop request | 2025-12-21 | **424419, 424418, 424417, 424416** |
| E5 Event booking | 2026-08-25 | **176988, 176981, 176980** |
| E6 Context-dependent event question | 2026-10-08 | **904, 903, 902, 901, 900** |
| E7 IT support with knowledge references | 2025-10-02 | **25924, 25923** |
| E8 Lunch opt-out | 2026-08-07 | **133725** |
| E9 Event opt-out | 2026-02-19 | **321665** |
| E10 Only reply when asked | 2025-10-21 | **423867** |
| E11 Reduced frequency | 2026-09-28 | **113449** |

Interpretation: request topics are automated estimates. Reply coverage is a 30-minute temporal association, not proof of relevance. Source references are retrieval metadata, not factual validation. The 40-case quality pilot is not representative enough for an overall good/bad percentage.

Counting: user IDs represent conversation histories, not verified unique people. Repeated requests remain separate records. All 824 repeated message IDs have differing timestamps and are retained; exact user + message ID + timestamp duplicate keys: 0. The export is not an atomic snapshot.

The PDF embeds an English evidence manifest, calculation summaries and audited source rows. No Excel file is required.
